

Challenges on non-English pages

Angel Herráez
University of Alcalá
Spain

Challenges on non-English pages

- not many!
- User names
 - May have special characters – **no problem**
- Characters in green links / buttons (solved)
- Atom labels and echos
 - Characters may be either typed, pasted or added by their Unicode
 - label átomo is remembered as label \u00e1tomo
 - **OK from console and from SAT**
 - set echo a 50% 100%; echo hola; echo adiós;
 - **n/a in SAT; OK from console + SAT scene saving**
 - if needed, use the Hex Unicode (Jmol scripting)
 - !!** echos will then need quotes around all text
 - echo "\u00E1tomo" echo "\u00E1tomo"
 - User:Angel Herraez/Sandbox 5

Challenges on non-English pages

- Pages
 - Policy for page names :: will everyone comply?
 - Tutorial:How_do_we_get_the_oxygen_we_breathe_(Spanish) i.e. title in English followed by English name of the language
 - A page with not proper name should be **moved** to the proper name (that way, history etc. is conserved)
 - Page wikisource should include (at bottom) the relevant Category tag
 - Pages that are a translation of another language should have the proper tags so that inter-language links are displayed
 - Help and listing for each language: please read <http://proteopedia.org/w/Proteopedia:Languages>

Uses in teaching & misc. utilities

- End of Degree Projects
 - focused of the analysis and display of structural features of proteins, interaction with ligands, etc.
 - proteopedia.org/w/User:Carlos_Vázquez_García/TFG (**K-Ras** protein)
 - proteopedia.org/w/User:Carolina_Castro_Hernández/TFG (**gp120 and gp41**, envelope proteins of HIV)
- Molecular Playground @ UAH: in site and online, at http://www3.uah.es/mol_play
- proteopedia.org/w/Tutorial:Ramachandran_Plot_Inspection
- Make an animated image of any Proteopedia scene
- proteopedia.org/w/Helices_in_Proteins (alpha, 3-10, pi)
- proteopedia.org/w/Forms_of_DNA (A, B, Z)
